

ZODIAC HAWK

Thermal Transfer Overprinter

YOUR QUESTIONS, ANSWERED.

Q How is the Zodiac Hawk better than my existing equipment?

A

The Zodiac Hawk will provide you with an early warning of a potential loss of code quality and help to minimise production disruption and downtime, as well as reduce the risk of customer complaints or fines, with its cost implications and potential damage to brand reputation.

Q How can the Zodiac Hawk reduce my production downtime?

A

With the simplest ribbon cassette design in the industry, the Zodiac Hawk allows operators to change the thermal ribbon in seconds. It also takes the largest standard ribbon length of 1200m which means faster and less frequent ribbon changes. All this combined with a full colour CLARiTY touchscreen operator interface means selecting print jobs and making adjustments is fast and easy.

Q How can the Zodiac Hawk increase my uptime?

A

An electronic printhead control maintains high print quality and removes the need for compressed air with associated cost and downtime. Minimal wear parts are also easy to change out reducing maintenance interruptions. As well as this, the Zodiac Hawk is now 25% faster than previous models and can run up to 500 packs per minute.

Q How can the Zodiac Hawk save me money?

A

It's ultrafast with print speeds from 1mm/sec up to 1000mm/sec, does not require compressed air, has outstanding reliability, minimal wear parts, ribbon save modes and built in iAssure technology to check, monitor and report bad prints in real-time

Q Can the Zodiac Hawk integrate with various packaging systems?

A

The Zodiac Hawk has a modular design for easy integration into many of today's complex industrial packaging systems such as: Vertical & Horizontal Form Fill & Seal Machines, Thermoform & Tray Sealing Machines, Label Applicators and Linerless Label Applicators.

Q How can I see the Zodiac Hawk in action?

A

To see the Zodiac Hawk in action, give us a call and we will arrange for one of our sales team to visit your site. Alternatively, you can visit our product showroom just off Junction 27 of the M1 in Nottingham.
